

BioCube 8 Fish Saver

INSTRUCTIONS AND TROUBLESHOOTING

The BC8FS was designed to keep livestock from finding their way in the rear chambers. Simple drop in design is easy to install. Place in the rear chamber area with the hood lifted so that the guard leans towards the rear of the tank. Make sure all notches are lined up with the proper chambers. The guard will rest on lips in chamber two and it will extend past the light splash guard. There is a round notch that goes around the output elbow from the return pump.

A stay hold piece is included. It is used to keep the fish saver up against the false wall. Place it on the chamber two/three wall with the two pieces facing downwards closer to the rear of the tank.

See picture for further instruction. View of picture is if you were looking from back of tank.
